Introductory Combinatorics (5th Edition) View more editions. An chessboard has a perfect cover by

dominoes if and only if at least one of  $m$  and  $n$  is even. Let's prove this using the method of proof by contradiction. If both  $m$  and  $n$  are odd, then there are an odd number of squares on the chessboard. But a single domino covers 2 squares. Therefore, a perfect covering would not be possible in this case.
