Introduction to Thermodynamics. A car engine, for example, burns fuel for heat transfer into a gas. Work is done by the gas as it exerts a force through a distance, converting its energy into a variety of other forms—into the car's kinetic or gravitational potential energy; into electrical energy to run the spark plugs, radio,...

Key Terms. work: A measure of energy expended by moving an object, usually considered to be force times distance. No work is done if the object does not move. Thermodynamics is the study of heat energy and other types of energy, such as work, and the various ways energy is transferred within chemical systems.

-Heat flowing from a high-temperature body to a low-temperature body. -Adding heat to a

substance. • We now have another definition of entropy: entropy is a measure of the dispersal of energy in a system. -Heat flowing from high-temp to low-temp increases entropy because the energy is becoming more spread out.

A Brief Introduction to Thermodynamics - Computer Science

Introduction to Thermodynamics. Some chemical reactions release heat energy; they are called exothermic reactions, and they have a negative enthalpy change. Others absorb heat energy and are called endothermic reactions, and they have a positive enthalpy change. But thermodynamics is concerned with more than just heat energy.
