If $x \leq e$ is true for all real numbers $e > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality $x = 0$.

Order properties of the real numbers. Every nonempty subset of that has an upper bound has a least upper bound that is also a real number. These order-theoretic properties lead to a number of important results in real analysis, such as the monotone convergence theorem, the intermediate value theorem and the mean value theorem .
