The corrosion of structural steel is an electrochemical process that requires the simultaneous  
presence of moisture and oxygen. Essentially, the iron in the steel is oxidised to produce rust, which  
occupies approximately six times the volume of the original material.

### **Corrosion of structural steel - SteelConstruction.info**

Surface preparation is the essential first stage treatment of a steel substrate before the application  
of any coating, and is generally accepted as being the most important factor affecting the total  
success of a corrosion protection system.. The performance of a coating is significantly influenced  
by its ability to adhere properly to the substrate material.
