A digital Signal is a signal which has values either 1 or 0. It is a time series that is a function of 1 or 0, which represent the on or off state. While in Discrete signal, it is a time series that is a function of domain of Integer. Keep in mind Integer, so the domain range can be whatever, it can represent any value. Like different ranges are - (-3, -2, -1, 0, 1, 2, 3), (5, 6, 7, 8) etc. on the other ...

Digital signal. A digital signal is a signal that is being used to represent data as a sequence of discrete values; at any given time it can only take on one of a finite number of values. This contrasts with an analog signal, which represents continuous values; at any given time it represents a real number within a continuous range of values.
