Hello, I need some help. I have a 2000 Jetta VR6. I just recently changed the cat converter, so I bought a bosal one, because the VW dealership wanted way too much money for the replacement. The check engine light will not turn off now, even though I recently changed the downstream O2 sensor as well.

I scanned one of my co-workers car for her today. And got 14 different codes. I am not very familiar with the MKIV or VR6 but I told her boyfriend I would see if I could at least point him in the right direction. The only symptom I know of is the car is difficult to start when it's cold. To me it seems there is probably 1 or 2 actual problems causing all of these codes.
