### Introduction to Linear Algebra by Gilbert Strang - Goodreads

The crucial operation in linear algebra is to take linear combinations of column vectors. This is exactly the result of a matrix-vector multiplication.  $Ax$  is a combination of the columns of  $A$ . When we take all combinations  $Ax$  of the column vectors, we get the column space.

### **Book Review: Introduction to Linear Algebra by Gilbert Strang**

Linear algebra moves steadily to  $n$  vectors in  $m$ -dimensional space. We still want combinations of the columns (in the column space). We still get  $m$  equations to produce  $b$  (one for each row). Those equations may or may not have a solution. They always have a least-squares solution. The interplay of columns and rows is the heart of linear algebra.
