Wireless Communication is the fastest growing and most vibrant technological areas in the communication field. Wireless Communication is a method of transmitting information from one point to other, without using any connection like wires, cables or any physical medium.

### **Wireless Communication: Introduction, Types and Applications**

Wireless speeds have increased significantly, getting close to wireless Gigabit. IEEE uses 802.11 for all protocols that are related to wireless. Most of us have seen or heard about 802.11a, 802.11b, 802.11g, 802.11n and/or 802.11ac before.

In 1897 Guglielmo Marconi was the first to demonstrate that it was possible to establish a continuous communication stream with the ships that were sailing in the English Channel, by means of radio waves. Since then, the wireless technologies that make "on-the-move" communication possible for us have evolved remarkably. Today, facilitated by RF circuit fabrication
