If an engine is being remanufactured to meet specific criteria, that usually means boring and honing to achieve a standard oversize (.010?, .020? or .030?). The oversize will depend on the thickness of the casting, how much boring it can safely handle without the cylinder walls getting too thin, and the amount of wear in the cylinders.

To achieve a plateau finish, one of two methods can be used: a two-step honing procedure or a one-step honing procedure, followed by a brief brushing process. With the two-step plateau honing procedure, the cylinder is honed with coarse to medium stones followed by a very fine abrasive for a few strokes to remove only the tops of the peaks.
