In mathematics and computer science, an algorithm (/ˈælɡərɪðəm /()) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing, automated reasoning, and other tasks.. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a ...

In computer science, a heap is a specialized tree-based data structure which is essentially an almost complete tree that satisfies the heap property: in a max heap, for any given node C, if P is a parent node of C, then the key (the value) of P is greater than or equal to the key of C. In a min heap, the key of P is less than or equal to the key of C. The node at the "top" of the heap (with no ...

1. Introduction. Risk assessment models today play an increasing role in data protection, as recently confirmed by the EU General Data Protection Regulation (hereinafter GDPR). 1 Various types of assessment models can be adopted: they may be mandatory or voluntary, self-assessments or third-party/licensing schemes. They can only assess specific kinds of data processing or types of risk.
