Java is a general-purpose programming language that is class-based, object-oriented, and designed to have as few implementation dependencies as possible. It is intended to let application developers "write once, run anywhere" (WORA), meaning that compiled Java code can run on all platforms that support Java without the need for recompilation. Java applications are typically compiled to ...

Base Is Base a database? Not technically. Database applications often incorporate separate "front-end" and back-end components. Base is no exception. This two-tiered software model provides flexibility and the necessary data-durability. It involves separating the graphical user-interface (GUI front-end) from the core database functionality (database engine back-end).
