Cranes and Hoists - Home | Occupational Safety and Health ...

A crane is a type of machine, generally equipped with a hoist rope, wire ropes or chains, and sheaves, that can be used both to lift and lower materials and to move them horizontally. It is mainly used for lifting heavy things and transporting them to other places. The device uses one or more simple machines to create mechanical advantage and thus move loads beyond the normal capability of a human.

In the past few years, there have been a number of serious incidents and close calls in crane

operations. Some of these incidents occurred when cranes overturned, when the crane or its load came in contact with overhead live powerlines, or when the cranes or the material that they were lifting struck or crushed workers when the load was dropped on or swung into them.
