Transmission oil is a mixture of base oil and additives with very good anti-wear and anti-scoring properties and good stability to thermal oxidation. Manual transmissions use a variety of oils: regular motor oil, heavyweight hypoid gear oil or even automatic transmission fluid in some cases.

How to check Transmission Fluid (MTF)? - Advice / ELF

How Manual Transmissions Work. First, any engine has a redline — a maximum rpm value above which the engine cannot go without exploding. Second, if you have read How Horsepower Works, then you know that engines have narrow rpm ranges where horsepower and torque are at their maximum. For example, an engine might produce its maximum horsepower...

How Manual Transmissions Work | HowStuffWorks

If it is a manual transmission it would not have a neutral safety switch - it may have a clutch safety switch usually located at the upper end of the clutch pedal under the dash area. Answer .

Manual Transmission Basics | Edmunds

A manual transmission is basically a more powerful version of a bicycle's gear shifter. Even though there's no chain in your car like there is in a bicycle, the engine and transmission have to be temporarily disconnected just like a bicycle chain is temporarily lifted off of the gears when you shift up or down.

What Does A Transmission Do? - Meineke Car Care

You would need to put some kind of pump in order for a transmission cooler to work on a manual tranny. Autos obviously have a pump that pumps the fluid up to the radiator(in a stock car) an then back to the tranny. Manuals do not so that would be the difficult part. As others said there is obviously some other problem.

Question: Transmission cooler on a manual? - Is1.com

The manual transmission of my Civic uses 10W-30 motor oil, but I can think of a few reasons most manual transmissions don't have filters. There is no oil pump. The oil gets circulated by the movement of the gears, so there is nothing to push the oil through a filter.

Manual transmission and filters - General Discussion - Car ...

Manual transmissions have gear oil in them. They are filled at the factory and normally don't need to be refilled. Most have a drain plug near the bottom on the gear box and a fill plug somewhat higher up. Changing or adding gear oil to a manual transmission is rarely if ever done.
