James was an undergraduate at McGill University, where he worked in the lab of Francois Fagotto on *Xenopus* developmental biology. During the summers, he returned to his hometown of Toronto and worked in Alan Davidson's lab on TetR repressor biophysics and bacteriophage genomics.. He moved to California in 2005 to do his PhD in Molecular and Cellular Biology at UC Berkeley.

The Conductivity Probe has three ranges, providing optimal precision in any given range. Biology teachers can use this probe to demonstrate diffusion of ions through membranes. Chemistry students are able to quickly investigate the difference between ionic and molecular compounds, strong and weak acids, or ionic compounds that yield different ratios of ions.

Course Overview. My AP Biology course is designed to offer students a solid foundation in introductory college-level biology. By structuring the course around the four big ideas, enduring understandings, and science practices I assist students in developing an appreciation for the study of life and help them identify and understand unifying principles within a diversified biological world.

We found that the GP:GN ratio was strongly affected by plant functional group removals; the ratio increased significantly after shrub removal, and to a lesser extent after tree roots removal (). In partial agreement with our first hypothesis, this suggests that tree and shrub removals (but not mosses) led to an increase in the GP:GN ratio (). The observed changes in the GP:GN ratio were due to a ...

TWO MAIN APPROACHES FOR AN EEI . In general there are two main methods used in senior high school EEIs. They are: The method of artificial variation: where you manipulate one variable to see the effect on the other (and keeping the rest constant) For example, what is the effect of temperature (the manipulated or independent variable, IV) on the enzyme digestion of starch (the dependent ...
