John Deere Des Moines Works Factory Tour Video

A hit-and-miss engine is a type of four-stroke internal combustion engine that is controlled by a governor to operate at a set speed. It was conceived in the late 19th century and produced by various companies from the 1890s through approximately the 1940s. The name comes from the speed control on these engines: they fire ("hit") only when operating at or below a set speed, and cycle without ...

John Deere Engine Works Tour in Waterloo - Yahoo Local

John Deere two-cylinder engines use a "180-degree crank": The throws of the crankshaft are offset 180 degrees, so that when one piston is up, the other is down. That balances the internal dynamics of the engine--the inertia of one piston moving up is offset by the inertia of the other piston moving down, and the volume of air in the crankcase ...

Animated Two-Cylinder

John Deere prefers that 10W-30 be used in all its gasoline-powered engines, including those on riding mowers. The "W" indicates that the oil was tested at low air temperatures. A 10W-30 weight engine oil is viscous even at temperatures as low as negative 4 degrees Fahrenheit.
