An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation.. An artificial neuron mimics the working of a biophysical neuron with inputs and outputs, but is not a biological neuron model.

Artificial neural network - Wikipedia

1. Introduction. Project management has been in vogue since the end of the 1980s, even though it is not, by any means, a simple trend. Interest in the various means of steering human activities has not declined over time in the media, as well as managerial and academic circles.

A history of project management models: From pre-models to ...
