In Section 10.12 of Intermediate Physics for Medicine and Biology, Russ Hobbie and I provide examples of negative feedback. One of these examples analyzes how pupil size is controlled by the light impinging on the retina. The pupil changes diameter in response to the amount of light entering the eye. This is one of the most easily studied feedback systems in the body, because it is possible to ...

In Chapter 14 of Intermediate Physics for Medicine and Biology, Russ Hobbie and I discuss the differential cross section. We may wish to know the probability that particles...are scattered in a certain direction. We have to consider the probability that they are scattered into a small solid angle $d\Omega$. In this case, σ is called the differential scattering cross section and is often written as

where L is a length characteristic of the problem, V a velocity characteristic of the problem, ρ the density, and η the viscosity of the fluid. When N_R is greater than a few thousand, turbulence usually occurs.. The Reynolds number arises in the following way. If we were to write Newton's second law for a fluid (which we have not done) in terms of dimensionless primed variables such as ...
