Fuel injection is the introduction of fuel in an internal combustion engine, most commonly automotive engines, by the means of an injector.. All diesel engines use fuel injection by design. Petrol engines can use gasoline direct injection, where the fuel is directly delivered into the combustion chamber, or indirect injection where the fuel is mixed with air before the intake stroke.

High-Pressure Common-Rail. 5.9L Cummins engines built between 2003-2007 and all 6.7L mills utilize a high pressure common-rail fuel system. At the heart of the system sits a Bosch CP3 injection pump, which is responsible for creating in excess of 23,000 psi of fuel pressure and then maintaining that pressure. It's rumored that the version of the CP3 that graces the 6.7L flows more, but we ...

An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.
